

OZAIR KHAN

Full-Stack & 2D Game Developer

Karachi, Pakistan | +92 335 8180215 | ozairk.work@gmail.com

Portfolio: ok-folio.vercel.app | GitHub: [Ozair Khan](#)

SUMMARY

Versatile Full-Stack and 2D Game Developer with extensive experience engineering complex web applications, AI-integrated platforms, e-commerce automation systems, and 2D physics games. Proficient in the MERN-PERN stack Next.js, Docker, DigitalOcean, and Godot Engine. Proven track record of developing multi-sided legal marketplace ecosystems, automated eBay REST API integrations with AI image-analysis pipelines, and production-ready game logic. Skilled in containerized deployments, cloud hosting, RESTful architectures, and responsive UI design.

TECHNICAL SKILLS

- Frontend Web Development: React, Next.js, JavaScript (ES6+), TypeScript, Tailwind CSS, CSS3, HTML5
- Backend & DevOps: Node.js, Express, MongoDB, PostgreSQL, RESTful APIs, Docker, Containerization
- Integrations & Automation: eBay Sell REST API (OAuth 2.0, Inventory & Fulfillment APIs), AI Image Analysis Pipelines, LiveKit
- Cloud & Hosting: DigitalOcean (Droplets/Deployment), Vercel, Netlify
- Game Development: Godot Engine, GDevelop 5, GDScript, 2D/3D Game Mechanics, Game Physics, Sprite Animation
- Developer Tools: Git, GitHub, VS Code, Piskel, Itch.io

WORK EXPERIENCE

Full-Stack & Game Developer

QF Network | April 2025 – Present

- Engineered "Justice Shield", a multi-sided legal marketplace OS featuring automated triage, subscription access control, case intake workflows, and real-time legal emergency routing.
- Built an automated AI-Powered eBay Listing Generator using eBay's official Sell REST API (OAuth 2.0), incorporating AI image-analysis pipelines to automatically generate SEO titles, keywords, and dynamic 3:4 / 2:3 aspect-ratio variant matrices.

- Architected 2D physics puzzle games including "Tummy Tower" and "Mad Frogs", creating custom block tracking algorithms, collision logic, and animation state machines in Godot Engine using GDScript.
- Managed containerized environments using Docker and executed scalable cloud deployments on DigitalOcean.

2D Game Developer

Digital Bee Studio | September 2024 – February 2025

- Engineered custom 2D game mechanics, physics engines, and sprite animation pipelines for three 2D platformer games utilizing GDevelop 5.
- Designed runtime game loop logic and performance optimizations for a 3D endless runner game, ensuring stable frame rates across web and desktop platforms.
- Collaborated with design teams to integrate visual assets, user control schemes, and responsive UI components into published titles.

FEATURED PROJECTS

Justice Shield / Guardian Ally — Legal Marketplace Ecosystem (QF Network)

- Streamlined legal assistance by centralizing end-user intake and vendor dispatch into a unified, high-availability platform.
- Solved critical response time challenges by implementing an automated AI triage system for urgent criminal and civil matters.
- Integrated LiveKit audio/video communication modules and containerized backend microservices with Docker for DigitalOcean deployment.

AI-Powered eBay Listing & Automation Platform (QF Network)

- Increased operational efficiency by automating the entire eBay listing lifecycle, reducing manual data entry for large-scale inventory.
- Reduced content creation costs by leveraging a low-token AI vision pipeline to generate high-conversion SEO metadata from visual assets.
- Developed dynamic variant grouping logic to automatically detect and assign 3:4 and 2:3 poster size matrices (4 size variants each) along with bulk upload execution.

Tummy Tower & Mad Frogs — 2D Game Development (QF Network)

- Engineered custom 2D physics puzzle mechanics, block tracking algorithms, and state machines in Godot 4 using GDScript.
- Structured modular scene hierarchies, custom sprite sheet animations, and dynamic gameplay loops.

Glimpse — Full-Stack Web Application

- Engineered a full-stack media-sharing application built on the MERN stack supporting photo publishing, dynamic user feeds, social interactions (likes, comments, follows), and custom content expiration logic.

EDUCATION

Intermediate in Computer Science (ICS)

Board of Intermediate Education, Karachi | Expected Completion: 2027

Matriculation in Computer Science

Board of Secondary Education, Karachi | 2024 – 2025
